PhD Exercise Science and
Community Health UM
Assistant Research
Professor

Addressing the significant needs that exist back home is a huge motivator for me. I intend to spend the rest of my career on finding strategies that cast the broadest net and impact as many people as possible to prevent disease and help them to live a healthy lifestyle. There's much work to be done, but I've been given a platform to influence others in a positive way, and I intend to do that to the best of my ability.
