MONTANA DRIVER EDUCATION AND TRAINING CURRICULUM GUIDE CLASSROOM AND IN-CAR SCOPE AND SEQUENCE

	Behind the Wheel Lessons
Classroom Module Lessons	
Module 1: Course Overview/Parent Orientation • teen driver education and training program goals • course structure, policies and rules • Graduated Driver Licensing Law • responsibilities of the instructor, parent and student • behaviors resulting in driver errors • crash statistics in Montana and nationally • risks associated with poor driving habits	
 Module 2.1: Preparing to Drive function of alert and warning symbols, and gauges location, function, and operation of vehicle control devices and safety, communication, and convenience devices pre-entry tasks made around the vehicle entry into the vehicle tasks seating, steering wheel (if adjustable), and restraint adjustments traditional mirror adjustments enhanced side view mirror (GBE) settings securing and exiting tasks after stopping a motor vehicle. 	In-Car Lesson 1 Environment: Parking Lot • Preparation to Drive • Orientation to Controls/Adjustments * All Occupants Buckled Up • Starting the Vehicle • Steering Wheel Control • Putting the Vehicle into Motion • Managing Speed Control • On/Off Targeting (Vision Control) — Turn Head before Turning Wheel • Tracking on a Straight Path • Stopping Smoothly with Controlled Braking • Stopping Quickly with Threshold Braking • Securing and Exiting the Vehicle
 Module 2.2: Basic Control blind areas to the front, sides, and rear of a vehicle targeting establishes steering accuracy visual reference points pre-drive and starting tasks four (4) steering wheel control techniques procedures for entering and leaving the roadway acceleration control controlled, threshold, and trail braking control left and right precision turns, stopped and moving backing straight and while turning 	In-Car Lesson 2 Environment: Low Speed, Low Risk Traffic • Locating Reference Points • Selecting Lane Positions • Searching Intersections • Responding to Signs/Signals/Markings • Entering Intersections • Turning Right from a Stop and While Moving • Turning Left from a Stop and While Moving • Backing on a Straight Path • Backing While Turning
 Module 3.1: Strategies for Effective Vision Control fields of vision overcoming physical visual problems effect speed has on vision techniques to improve vision while driving good driving habits 	

Module 3.2 : Strategies for Managing Time and Space	Drive Three Objectives
	Environment: Low Risk Traffic
components of a space management system	
 orderly visual search pattern 	Responding to Traffic Signs, Signals,
 changes to line of sight restrictions 	Markings
changes to path of travel restrictions	 Yielding Right of Way
six zone locations	 Selecting Where to Stop
maximize lane positions	 Searching to the Front
• evaluate a gap	 Approaching & Recognizing Intersections
control vehicle space to the front, sides, rear	Types
communication techniques	Searching Intersections
orderly visual search process	 Identifies Line of Sight/Path of Travel
evaluate target area	(LOS- POT) Restrictions
restrictions to the line of sight	Controlling Space to the Front
	- Judging Distance in Seconds
restrictions to the path of travel	
• 20 to 30 second visual search range	Establishing Following Time Selecting Lang Desitions
12-15 second visual search range	- Selecting Lane Positions
 4-6 second immediate response range 	Entering Intersections
 control space around the vehicle 	Changing Lanes
selecting a gap	 Reading Instruments
 communication prior to a speed or lane position 	
dangers of improper signaling	
respond to traffic to the sides and rear	
calculate distance traveled with various speeds	
• vehicle control sequence of vision control, motion control, and	
steering control	
Module 3.3: Strategies for Mixing with Traffic	
• yielding right of way	Drive Four Objectives
• yielding to emergency vehicles, funerals, school buses, and	Environment: Moderate Traffic
	• Evaluating Target Path
pedestrians	
• right of way rules at intersections with highway-rail grade crossings	Searching to the Front Despending to LOS/DOT Conditions
 different intersection types, including roundabouts 	Responding to LOS/POT Conditions
 respond to traffic signs, signals and markings. controlled and 	Selecting Lane Positions
uncontrolled intersections	Applying Speed Control
 controlled and uncontrolled railroad crossings 	 Stopping With Vehicle in Front
 searching skills to the left, front, right and rear of the vehicle 	 Using Staggered Stops for Space
 identify and select the best lane position, best speed, and 	Management
communication	 Delaying Moving for 2 Seconds
 legal and staggered stop positions 	 Identifying Open/Closed Zones
vision, motion and steering control	Using Share Lanes
Iane change and passing	Passing and Being Passed
blind area checks and mirror use	5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5 5
speed adjustment	
lane positions vision motion and starring control	
vision, motion and steering control	
communication techniques	

	1
Module 3.4: Sharing the Road with Other Users	
• pedestrians	
• bicyclists	
motorcyclists	
• trucks	
• trains	
• buses	
construction vehicles	
farm machinery	
slow-moving vehicles	
oversized vehicles	
vehicles towing trailers	
recreational vehicles	
mopeds and scooters	
emergency vehicles	
funeral processions	
• animals	
Module 3.5: Vehicle Control in Limited Spaces	Drive Five Objectives
2 point turnabouts	Environment: Low Risk Traffic
3 point turnabouts and	 Selecting and Performing Turnabout
• U turns	Options
angle parking	— Mid-Block U-Turn
parallel parking	 Intersection U-Turns
street/curb parking	 Two-Point—Right and Left
 perpendicular forward parking 	 Three-Point
 perpendicular backing into parking space 	 Forward Perpendicular Parking
 parking on a uphill and downhill with and without a curb 	Angle Parking
 parking in restricted parking areas 	
	Drive Six Objectives
	Environment: Low to Moderate Traffic
	and Speeds, Parking Lot
	Space Management
	Backing into Perpendicular Parking
	Backing into an Alley or Driveway
	Making Legal Stops & Staggered Stops
	Responding to Signs/Signals/Markings
	Practice Commentary Driving

 Would + 1. Fundamination to the set of the control of the contres of the control of the contres of the contres of the	Module 4.1: Natural Laws Affecting Vehicle Control	
	-	
 effect of speed on energy of motion forces of an impact tire condition and air pressure on traction forces while in a curve eactors that affect braking distance vehicle modifications on vehicle balance and traction forces of energy on vehicles of different weights and size - vehicle's maximum load eause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance and control hands and steering techniques to maintain vehicle balance and control hands and steering techniques to maintain vehicle balance and control eaceleration and brainty, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels traction loss and effect to loss and vehicle bilance are affected by steering, acceleration, deceleration and braking techniques to maintain vehicle balance traction and vanitage of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced intrastion prove of aribags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults enhanced travise of a crash and the effect on the restrained and uurrestrained human body locations and purpose of aribags, belt adjusters, and head restraints and demonstrate proper sequestra		
 forces of an impact tire condition and air pressure on traction forces while in a curve factors that affect braking distance vehicle offications on vehicle balance and traction forces while in a curve factors of energy on vehicles of different weights and size • vehicle's maximum load cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control fact of vehicle acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stabili		
 tire condition and air pressure on traction forces while in a curve factors that affect braking distance vehicle modifications on vehicle balance and traction forces of energy on vehicles of different weights and size • vehicle's maximum load cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance and control hands and steering techniques to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control feet positions to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vaking sof 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/		
 forces while in a curve factors that affect braking distance vehicle modifications on vehicle balance and traction forces of energy on vehicles of different weights and size • vehicle's maximum load cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control edet positions to maintain vehicle balance and control etraction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and roadway surfaces fuction and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (in		
 factors that affect braking distance vehicle modifications on vehicle balance and traction forces of energy on vehicles of different weights and size • vehicle's maximum load cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance and control hands and steering techniques to maintain vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control eaceleration and braking techniques to maintain vehicle balance and control reaction so and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection for adults edmonstrate proper steering wheel adjustments to accommodate 	•	
 vehicle modifications on vehicle balance and traction forces of energy on vehicles of different weights and size - vehicle's maximum load cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control effect of vive vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control eacceleration and braking techniques to maintain vehicle balance and control traction loss an affect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems control systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection 		
 forces of energy on vehicles of different weights and size • vehicle's maximum load cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheeld drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and valutages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of anhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection 		
 vehicle's maximum load cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control eagressive steering, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control eceleration and braking techniques to maintain vehicle balance and control eceleration and braking techniques to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection 		
 cause and effect of vehicle load changes (balance) from side to side, front to rear, and rear to front effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control eggressive steering, braking, and acceleration affects vehicle balance and control eter positions to maintain vehicle balance and control etactoin loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection or adults demonstrate proper steering wheel adjustments to accommodate 		
side, front to rear, and rear to front effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control eggressive steering, braking, and acceleration affects vehicle balance and control ceter positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control ceteration and braking techniques to maintain vehicle balance and control caceleration and braking techniques to maintain vehicle balance and control caceleration and braking techniques to maintain vehicle balance and control caceleration and braking techniques to maintain vehicle balance and control caceleration and rate to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance conditions that can create traction loss and vehicle imbalance condition and radway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection for common strate proper steering wheel adjustments to accommodate		
 effect of vehicle load on vehicle balance proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control acceleration loss on a front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and purpose of airbags wheel adjustments to accommodate 		
 proper seating position for vehicle balance and control hands and steering techniques to maintain vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheels conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and purpose of airbags wheel adjustments to accommodate 		
 hands and steering techniques to maintain vehicle balance and control aggressive steering, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems het here collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection 		
 control aggressive steering, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection 		
 aggressive steering, braking, and acceleration affects vehicle balance and control feet positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection 		
balance and control feet positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems • the three collisions of a crash and the effect on the restrained and unrestrained human body • locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults • child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection • demonstrate proper steering wheel adjustments to accommodate		
 feet positions to maintain vehicle balance and control acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
 acceleration and braking techniques to maintain vehicle balance and control traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
and control • traction loss and effect to the front wheels and rear wheels • manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle • conditions that can create traction loss and vehicle imbalance • traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces • function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems • vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems • the three collisions of a crash and the effect on the restrained and unrestrained human body • locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults • child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection • demonstrate proper steering wheel adjustments to accommodate		
 traction loss and effect to the front wheels and rear wheels manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
 manage traction loss on a front wheel drive, rear wheel drive, and all wheel drive vehicle conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
all wheel drive vehicle • conditions that can create traction loss and vehicle imbalance • traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces • function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems • vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems • enhanced (variable/assist) steering, stability control and traction control systems • the three collisions of a crash and the effect on the restrained and unrestrained human body • locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults • child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection • demonstrate proper steering wheel adjustments to accommodate		
 conditions that can create traction loss and vehicle imbalance traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
 traction and vehicle balance are affected by steering, acceleration, deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
 deceleration and roadway surfaces function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
 function and advantages of 2- and 4- wheel anti-lock braking (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
 (ABS) systems vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
 vehicle braking systems and the proper braking techniques used for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate 		
for those systems; and explain the purpose of enhanced (variable/assist) steering, stability control and traction control systems • enhanced (variable/assist) steering, stability control and traction control systems • the three collisions of a crash and the effect on the restrained and unrestrained human body • locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults • child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection • demonstrate proper steering wheel adjustments to accommodate		
 (variable/assist) steering, stability control and traction control systems enhanced (variable/assist) steering, stability control and traction control systems the three collisions of a crash and the effect on the restrained and unrestrained human body locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults child restraint systems (infants, forward-facing, booster seats and lap shoulder devices) operate, proper positioning within a vehicle and how they provide crash survival protection demonstrate proper steering wheel adjustments to accommodate

Madula 4.0. Otrataging for Negatisting Lills and Ourses	Drive Seven Objectives
Module 4.2: Strategies for Negotiating Hills and Curves	Drive Seven Objectives
 respond to line of sight and path of travel restrictions 	Environment: Moderate Speeds and
approach to hills or curves	Traffic
 speed for ascending and descending hills 	 Space Management
 entry speed and lane positions for a hill or curves 	 Searching for Curves in Target Area
 speed and lane positions in a curves' apex 	 Adjusting for Best Speed
speed and lane positions for exiting curves	 Adjusting for Best Lane Position
maintain traction in curves	 Searching Through Curves
	Driving Through Curves
	- Approach
	– Visual Search
	 Speed Control/Trail Braking
	– Lane Position
	Managing Vehicle Balance
	Driving Up and Down Hills
	- Selecting Best Lane Position
	- Maintaining Speed Control
	- Stopping and Starting on a Hill
	– Parking on Hills
Module 4.3: Urban Driving	Drive Eight Objectives
 characteristics of an urban driving environments 	Environment: Complex with Increased
 signs, signals, and markings 	Speeds and Traffic
 hazards associated with urban driving 	Space Management
 different types of intersection and roadway configurations 	 Using a Visual Search Pattern
 time and space management strategies for urban environments 	 Recognizing Rear Zone Changes
	 Controlling Rear Zone
	 Keeping 3-4 Second Following Time
	 Navigating One-Way Streets
	 Communication and Courtesy
Module 4.4: Rural and Highway Driving	Drive Nine Objectives
characteristics of rural driving environments	Environment: Moderate Speeds and
signs, signals and markings	<u>Traffic</u>
hazards associated with rural driving	 Space Management
• animals in rural areas and know and abide by Montana's Open	 Passing and Being Passed on Two-Lane
Range Law	Roads
road conditions with proper lane position and speed	 Practicing ABS Braking (when available)
passing and being passed on two lane and multi-lane rural roads	e ex ,
slow moving vehicles	
time and space management strategies for rural driving	
environments	
Limited Access Highway Driving	
advantages and disadvantages of limited access highways	
• signs, signals, and markings	
types of expressway interchanges	
lane choice	
problems due to congestion	
good habits for entering and exiting limited access highways	
good habits for lane changes and passing	
higher speed can affect vehicle control	
 steering control, speed control, and braking control 	

 Module 5.1: Strategies for Adverse Conditions sources for glare and procedures to protect from glare low light or darkness conditions laws regarding headlights use headlight projection and efficient and proper use of vehicle illumination fog related reduced visibility conditions winter driving conditions caused by smoke and dust rain related reduced visibility extreme weather driving conditions such as flooding, heat, cold, storms, blizzards, and strong wind 	Drive Ten Objectives Environment: Interstate or Simulated Environment • Space Management • Entering, Lane Changing and Exiting Limited Access Highways
 Module 5.2: Strategies for Emergencies sudden tire deflation accelerator problems engine, cooling, steering, electrical, lighting, and brake failures vehicle fire skids emergency evasive steering, including proper response to startle return a vehicle to the pavement from an off-road condition Montana's Good Samaritan Law reporting a collision what to do at the scene of a collisions when law enforcement must be called after a collision respond to emergency personnel's directions insurance reporting requirements complete a collision report 	Drive Eleven Objectives Environment: Complex with Increased Speeds and Traffic • Space Management • Managing Zones • Sharing the Road with Other Users • Communication and Courtesy • Parallel Parking • Driving at Night (when available) • Rail Grade Crossing • Handling emergency situations (simulated if needed)
 Module 5.3 Protecting Occupants describe the three collisions of a crash and the effect on the restrained and unrestrained human body; identify and describe locations and purpose of airbags, belt adjusters, and head restraints and demonstrate proper adjustments and operation to provide crash survival protection for adults; identify how child restraint systems operate (infants, forward-facing, booster seats and lap shoulder devices), proper positioning within a vehicle and how they provide crash survival protection; and demonstrate proper steering wheel adjustments to accommodate for airbags. 	
 Module 5.4 Managing Risk with Vehicle and Roadway Design crash survival features incorporated into highway and vehicular design collision types and actions to control the consequences of a crash improved highway and vehicle technology helps minimize the consequences of a crash 	

Module 6: Deadly D's –Distractions, Drugs and Alcohol, Drowsy and Dangerous Emotions Driver Fitness and Responsibilities

6.1 Distractions

- vehicle audio and video systems distract
- cell phones distract
- passengers distract
- unrestrained animals can distract
- eating, drinking, and smoking distract
- reading can distract
- personal grooming can distract
- conditions outside the vehicle can create distractions
- personal plan for reducing distractions while driving

6.2 Drugs and Alcohol

- senses used while driving
- emotions effect on driver behavior
- control emotions while driving
- temporary and permanent disabilities
- compensate for disabilities while driving
- · legal and illegal alcohol and drugs affect people differently
- amount of alcohol in various drinks
- blood alcohol content (BAC) related to a person's body weight
- BAC related to consuming a certain number of drinks containing alcohol in a given period of time
- synergistic effects of alcohol and/or drugs
- effects of alcohol and drugs on driver perception, vision, reaction time, and risk-taking
- · increased probability of being involved in a fatal traffic crash after drinking
- physiological and psychological effects of other drugs on the driving task
- wise not to use alcohol or other drugs while operating a motor vehicle
- develop a plan to intervene when someone is drinking
- say no to peer pressure involving alcohol or other drug usage
- scope of the overall alcohol/traffic safety problem in Montana and the United States
- alcohol is the most commonly used drug involved with driving
- facts about teenage drinking and driving in Montana and the United States
- excuses why people drink and drive or use drugs and drive
- · effect alcohol related crashes have on families and communities
- rules, regulations, and penalties applicable for minors in possession, minors and adults while driving under the influence, and open containers
- rules, regulations, and penalties applicable to minors and adults for improper use of a driver license to obtain alcohol

• rules, regulations, and penalties applicable to minors and adults for administrative license suspension and implied consent

6.3 Drowsy

- physical and mental effect of fatigue on driver behavior;
- importance of sleep and its effect on performance
- physical and mental symptoms of fatigue on the driving task
- methods to prevent driving while fatigued and drowsy

6.4 Dangerous Emotions – Road Rage

- aggressive driving behaviors that can lead to road rage
- driver errors that can lead to aggressive driving
- anxieties that can lead to dangerous driving behaviors
- strategies to reduce conflicts while driving
- anger management techniques to prevent aggressive driving and road rage

 Module 7.1: Driver Licensing and Final Assessment process of obtaining and maintaining a Montana driver license types of driver licenses and permits special information that may be placed on a driver license or instruction permit licensing restrictions, suspensions, and revocations placed on driving privileges license renewal processes Skills to reinforce and practice requirements and consequences during the graduated driver license period purpose of the supervising driver practice guide and how to utilize it during the required practice period guided behind-the-wheel practice strategies to continue and accept personal responsibility for the life-long learning process of reduced risk driving 	Drive Twelve Objectives • Skills Assessment (ideally with parent)
 Module 7.2: Owning a Vehicle and Trip Planning the components of the Highway Transportation System impact and consequences of personal driving behaviors on other users in the Highway Transportation System insurance obligations for owning and driving an automobile Montana's vehicle insurance laws coverage and conditions for automobile insurance establish and reduce automobile insurance denied or revoked reasons individuals have automobile insurance denied or revoked report to insurance agents after a crash purchasing a new or used automobile expenses associated with purchasing and owning a new or used vehicle understand the registration and titling process dashboard warning symbols and respond to an activated warning symbol under the hood vehicle maintenance checks service requirements of the steering, suspension, fuel, electrical, lighting, and braking systems mechanical and tire malfunctions and the importance of securing maintenance and repairs to eliminate potential driving problems Trip Planning routes for local and extended trips using state and local maps personal and vehicular needs for an extended trip cost of an extended trip; alternative routes trip planning information from the Internet prepare and load a vehicle for travel personal and global benefits of conserving energy, reducing pollution, and recycling costs linked to littering costs linked to littering personal strategies to reduce litter on M
